

## ACKNOWLEDGEMENTS

I am indebted to a number of people for their assistance in this project. The Rev. Gail Lindsay Marriner, Associate Minister, First Unitarian Universalist Church of Houston provided several valuable ideas in the preliminary stages of this project. Ms. Laura D. May, a doctoral student at Fuller Theological Seminary, kindly allowed me to make use of her extensive bibliography of books and journal articles related to my research. Dr. Douglas Vakoch, a psychologist with the SETI (Search for Extraterrestrial Intelligence) Institute in Mountain View, California, provided copies of several of his journal articles relating to my research, and put me in touch with Ms. May. Dr. Vakoch's research interests include the composition of interstellar messages, and the effects on religion of the possible future reception of extraterrestrial messages. Dr. Allen Tough, a futurist at the University of Toronto whose research interests include the cultural implications of the discovery of extraterrestrial intelligence, provided much early advice, and put me in touch with Dr. Vakoch.

I deeply appreciate the patience, advice and feedback of the project committee. Dr. Peter Bishop provided overall guidance for the project. Dr. Wendy Schultz introduced me to her "maximizing differences" approach to scenario writing, and conducted the October 2, 1999 brainstorming session. Dr. Craig White reviewed the project report from his literary perspective. And Dr. John Stroup of the Rice University Religious Studies Department acted as a theological check on my work.

Finally, I wish to thank three individuals in particular that have helped me on a professional level engage in the exciting work of interstellar communication. First, I wish to thank Mr. Charles M. Chafer, President, Encounter 2001, LLC for giving me the

opportunity to coordinate the Encounter 2001 interstellar transmissions. Dr. Yvan Dutil, an astrophysicist with the Canadian Defence Research Establishment in Valcartier, Val-Bélair, Quebec, headed the Encounter 2001 science team for the first set of transmissions earlier this year, and patiently tutored me in the science of interstellar communication. Finally, I wish to thank my friend, Professor Alexander L. Zaitsev, Senior Scientific Associate of the Russian Academy of Sciences Radio Engineering and Electronics Institute, for his close cooperation and work at the Evpatoria Planetary Radar facility in the Crimean Peninsula.
